DETAILED ACTION

Allowable Subject Matter

1. Claims 6, 7, 11, 12 renumbered 1 – 4 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art made of record, in single or in combination, fails to disclose explicitly the limitations of:

"wherein the fraction of bandwidth reserved for the node of the network corresponds in the sequence to a certain number of occurrences of passage of the token via the node, and wherein the master node, on initialization of the network, constructs a first table, stores in said first table for each node of the network information indicative of the fraction of bandwidth reserved for each node, and on the basis of the first table, constructs and transmits to each node a second table storing the sequence defining the order of passage of the token between the nodes of the network that reserved a fraction of bandwidth, and wherein each node that reserved a fraction of bandwidth transmits the token via the Ethernet network to a next node that reserved a fraction of bandwidth in the sequence, the transmission of the token is received by all nodes in parallel such that each node of the network follows circulation of the token." as disclosed in claim 6.

"a token, wherein the master node is configured to circulate the token between all nodes of the network during a cycle, and wherein the master node is organized to construct a first table storing, for each node of the network, information indicative of a fraction of the bus bandwidth reserved for each node of the network and to construct and to transmit to each node a second table storing a sequence defining a chronological order of passage of the token between nodes that reserved a fraction of bandwidth during a cycle, the fraction of the bandwidth reserved for any one node of the network corresponding in the sequence to a certain number of occurrences of passage of the

token via the one node, and wherein each node that reserved a fraction of bandwidth transmits the token to a next node that reserved a fraction of bandwidth in the sequence, the transmission of the token is received by all nodes in parallel such that each node of the network follows circulation of the token.” as disclosed in claim 11.

“a table received from a master node of the network storing a sequence defining a chronological order of passage of a token between the nodes that reserved a fraction of bandwidth during a cycle, the fraction of the bandwidth reserved for a node of the network corresponding in the sequence to a certain number of occurrences of passage of the token via the node, wherein the node that reserved a fraction of bandwidth transmits the token to the next node that reserved a fraction of bandwidth in the sequence so that each node of the network can follow the chronological order in the sequence, and wherein each node that reserved a fraction of bandwidth transmits the token to a next node that reserved a fraction of bandwidth in the sequence, the transmission of the token is received by all nodes in a parallel manner such that each node of the network can follow circulation of the token.” as disclosed in claim 12.

3. Additionally, all of the further limitations in claim 7 are allowable, since the claim is dependent upon independent claim.
4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
